

WENHOU YAN

Product Designer | Industrial Design + Interaction Design

+61 449923613 | 18705188117@163.com | [linkedin.com/in/wenhoughou-yan-3546653b8](https://www.linkedin.com/in/wenhoughou-yan-3546653b8) | <https://yanwenhou.tianyuhan.top>

PROFILE

Product designer with an Industrial Design background from UNSW and postgraduate training in Interaction Design and Electronic Arts at the University of Sydney. Experienced across product design, CAD modelling, rapid prototyping, user research and UI/UX, with hands-on capability from concept development through prototype validation. Strong at translating user needs into manufacturable product solutions and using iterative testing to improve usability, engineering feasibility and overall product experience.

Core capabilities: User Research | Product Strategy | Industrial Design | CAD Modelling | Rapid Prototyping | DFM | CMF | UI/UX Design

EDUCATION

University of Sydney (USYD) | Master of Interaction Design and Electronic Arts **Feb 2025 - Oct 2026**

University of New South Wales (UNSW) | Bachelor of Industrial Design **Sep 2021 - Sep 2024**

PROFESSIONAL EXPERIENCE

Independent Additive Manufacturing Studio | Design & Manufacturing Lead **Sep 2025 - Present**

- Built and operated a desktop additive manufacturing studio, managing client requirements, quotations, production scheduling, quality checks and after-sales delivery; completed 100+ customised manufacturing orders.
- Established a repeatable workflow covering slicing checks, in-process inspection, dimensional verification and post-processing, with rapid model and process iteration based on customer feedback.
- Delivered end-to-end modelling and FDM production, optimizing wall thickness, assembly interfaces, load direction and support strategy for manufacturability and reliability; selected materials, layer heights, infill and print orientation for appearance models, functional parts and small-batch production.

Haiketan Network Technology Co., Ltd. | UI Designer & Product Coordinator **Jan 2026 - Jul 2026**

- Led the 0-to-1 product design of SimpleUniLife, a one-stop service platform for international students, and coordinated front-end and back-end developers to deliver information architecture, core user flows, UI design and interaction logic for UNSW students in Sydney.
- Translated user research, task analysis and usage-path findings into a prioritised requirements backlog and MVP scope; used user stories, page flows, acceptance criteria and usability feedback to guide iteration.
- Built a reusable Figma design system covering colour, typography, spacing, grid, radii, icons and interaction states, using components, variants, variables and AI-assisted implementation workflows to maintain consistency across responsive pages.
- Developed an AI-assisted design and development workflow that decomposed page requirements into front-end components, interaction logic and API integration tasks; supported delivery through iterative debugging, code review and browser testing, while also producing AI-assisted campaign visuals and video assets.
- Worked with developers on page states, API fields, data structures, loading/empty/error states and access rules; completed design QA and launch acceptance, enabling the MVP to go live within 14 days.
- Supported product promotion through social media, campus communities and partner channels; cumulative users reached approximately 220% of the stage target, with peak daily page views exceeding 2,000 PV.

Huashe Design Group | 3D Visualisation Intern **Oct 2023 - Jan 2024**

- Built architectural and environmental 3D scenes in SketchUp from project documentation, improving file structure through component reuse, model grouping, layer management and model optimisation to support design revisions and downstream visualisation.
- Used AI image tools to create rapid design previews for early concept evaluation and proposals, and assisted with organising 3D models, renderings, design reports and presentation materials under project naming and version-control requirements.

SELECTED PROJECTS

SANGRE - At-Home Cardiovascular Monitoring System | Product / Interaction Design **2024**

- Conducted user interviews, behavioural research and competitor analysis around home chronic-disease management, identifying barriers in conventional blood-testing workflows and defining the product direction for a multi-parameter home testing system.
- Designed a service architecture in which the device completes the full testing, result-viewing and recent-history workflow independently, while the mobile experience provides optional long-term trend management.
- Designed the product structure, internal modules and assembly relationships in SolidWorks, integrating the display, test-strip storage, detection area and removable components while considering manufacturability, cleaning, maintenance and consumable replacement.
- Completed multiple design iterations using SolidWorks, FDM 3D printing and physical prototypes, validating grip scale, blood sampling and application, test-strip handling, interface hierarchy and the overall user flow.

Coffee Machine Redesign - Breville Bambino | Industrial Design / Prototyping **2023 - 2024**

- Replanned the internal layout and component assembly relationships, using SolidWorks for structural modelling, assembly checks and key-part development while preserving the product's original operating logic and compact footprint.
- Used FDM 3D printing to prototype structural and interaction concepts, testing portafilter locking, body stability, component assembly, disassembly and maintenance through multiple iterations.
- Refined dimensions and operation flow based on prototype results, reducing the effect of locking forces on machine stability and improving everyday usability and maintenance convenience.

CR2032 Recyclable Button Cell Packaging | Packaging / Circular Design **2023 - 2024**

- Designed a modular button-cell package balancing child safety, convenient single-cell access and separation of paper/PET materials for recycling; selected as a Student Finalist in the Australian Packaging Innovation & Design Awards (PIDA).
- Conducted regulatory research based on Australian mandatory button/coin battery safety requirements, with reference to EN 862:2016 and IEC 60086-4:2019, to define child-resistant opening, single-cell release and adult usability objectives.
- Optimised material connections to reduce irreversible bonding between the paper backing and PET blister, enabling easier separation after use and improving recyclability.

SKILLS

CAD & Engineering: SolidWorks, Rhino, parametric modelling, assembly design, CMF, injection-moulding design

Prototyping & Manufacturing: FDM 3D printing, vacuum forming, slicing optimisation, post-processing, workshop fabrication

Digital Product Design: Figma, Adobe XD, UI/UX design, interaction prototyping, design systems

Visualisation: Blender, SketchUp, 3D rendering, AI-assisted concept visualisation, ComfyUI

Research & Collaboration: User research, market research, requirements analysis, systems analysis, cross-functional collaboration

Languages: Mandarin Chinese (native); English (professional working proficiency, IELTS 6.5)
